

Fight Bac[®]

**Works better than dips, AND
gives you bigger profits!**

IT ADDS UP

When you compare number of treatments and price:
2 CANS FIGHT BAC = 1 GALLON ORDINARY TEAT DIP

But add Fight Bac's extra benefits for the REAL payoff:

Lower
Medical
Costs

Higher Milk
Production
& Premiums

Zero
Waste

**Bigger
Profits with
Fight Bac**

Fight Bac's price is similar to ordinary teat dips, but look at its overall cost. You'll see Fight Bac delivers profit-generating benefits, making it the most cost-effective disinfectant available.

FEWER EXPENSES — Fight Bac controls mastitis better than any other teat disinfecting method. Research proves it reduces the number of cases.¹ And that reduces costly medical treatments.

HIGHER PROFITS — With less mastitis, milk production and milk quality go up. SCC levels go down, giving you better milk and higher premiums for it. You'll see less waste milk too.

NO WASTE — Unlike ordinary teat disinfectant in dip cups or sprayers, Fight Bac never spills, never needs to be replenished or thrown out. No equipment to clean or maintain either. It's fresh every time; no mixing or shaking. Less waste and less time wasted means more profit.

COMPARE AND SAVE

Blockade barrier dip	3.6 cents/cow
Bovadine	3.3 cents/cow
Udder Gold	3.0 cents/cow
Fight Bac	2.3 cents/cow
Mills Fleet Farm/1% iodine	1.7 cents/cow
Lauricare concentrate	1.6 cents/cow

Fight Bac®

THE BEST WAY TO DISINFECT TEATS

Mastitis is the most costly disease in American agriculture. Research shows it can spread easily within herds treated with conventional dip cup methods. So Dr. Geoffrey Westfall, a practicing veterinarian in Connecticut, has developed a better way to control this money-robbing infection. Fight Bac. This simple, yet revolutionary, aerosol disinfectant method is the most effective way to disinfect teats.

AEROSOL PROVEN BEST — Fight Bac's aerosol nozzle never touches the cow, so mastitis-causing bacteria can't spread from one animal to another. Each burst of Fight Bac not only disinfects, it also blows away residual milk that bacteria can thrive in. Water-soluble propellant temporarily chills and constricts the teat orifice, helping prevent bacteria from entering and causing infection. No CFCs, and empty cans may be recycled with household cans.

HEALTHIER HERD — Research proves Fight Bac reduces the number of mastitis cases.¹ That cuts down on costly medical treatments. Containing 0.4% Chlorhexidine as its active ingredient, Fight Bac helps lower somatic cell levels, so you end up with less waste milk and higher premiums for your higher quality milk.

IMPROVED TEAT CONDITION — Fight Bac contains 10% glycerin, a gentle emollient for healthier skin condition and reduced milking stress. With less water than traditional teat dips, this post-milk disinfectant evaporates quicker to help prevent chapping and cold weather damage.

Proper teat disinfection is the single most important procedure in preventing mastitis. For the absolute best in mastitis control and dairy profitability, use Fight Bac.
